Malhar Srivatsav

Computer Science Undergraduate | Software Engineering, Backend & Application Security
+91 6366504411 | malharsrivatsav2@gmail.com | LinkedIn | GitHub | Codolio

Education

Manipal Institute of Technology, Bangalore **2024 - Expected May 2028**
Bachelor of Technology in Computer Science *CGPA: 8.64/10*

Experience

Clazuno **June 2026 – Present**
Software Engineering Intern *Remote*

- Built a multi-step class creation wizard in React Native (Expo) with a schedule editor, time slot picker, and fee setup, integrated with existing REST APIs so trainers can create and publish classes end to end.
- Tested the website and mobile app extensively, helping catch and debug issues during development.
- Participated in code reviews and team meetings, collaborating with the engineering team on features and fixes.
- Set up the EAS Build pipeline for Android APK builds and distribution and removed a deprecated Google Auth dependency, enabling staging builds for the whole team.
- Developed the home screen and day/week/month calendar views for browsing and managing scheduled classes.
- Built platform-adaptive business profile screens with native and web views, dynamic route switching, and a refund policy modal.

Rift Labs **2025 – Present**
Founding Engineer *Bangalore, India*

- Shipped **Singularity Vault**, a zero-knowledge offline Android password manager on Google Play, using AES-256-GCM encryption with sub-2ms credential encrypt/decrypt latency.
- Achieved deliberate brute-force resistance at 1.15s key derivation per unlock using PBKDF2WithHmacSHA256 (100,000 iterations) without hurting everyday UX.
- Eliminated credential exposure with a 30-second idle timeout, 20-second clipboard auto-clear, and memory key wiping on backgrounding, with zero cloud dependency.
- Layered Android BiometricPrompt over a master-password root of trust across 5 cryptographic operation types.

Projects

PhishGuard | *TypeScript, Node.js, Express, PostgreSQL* | GitHub **2026**

- Built a phishing detection REST API with 15+ URL risk signals including Shannon entropy analysis, Punycode homograph detection, Damerau-Levenshtein typosquatting detection, and double-encoding evasion checks, integrated with Google Safe Browsing and URLhaus threat intelligence feeds.
- Designed a normalized risk scoring engine returning per-signal explainability in structured JSON, backed by PostgreSQL scan history, API key authentication, and rate limiting; deployed on Render.

Technical Skills

Languages: Python, Java, C, SQL, Kotlin, JavaScript, TypeScript
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Debugging, Testing
Frameworks & Mobile: React Native (Expo), React, Node.js, Express, Android (Jetpack Compose)
Backend, Data & Cloud: REST APIs, PostgreSQL, AWS (basic), Firebase (Auth, Firestore), Render
Engineering Practices: Git, GitHub, Code Reviews, Build & Deployment Pipelines (EAS Build), IDEs (Android Studio), Linux
Security: AES-256-GCM, PBKDF2WithHmacSHA256, Android Keystore, BiometricPrompt API, Session Management, Web Application Security

Achievements & Certifications

- Solved 300+ data structures and algorithms problems on LeetCode.
- Finalist, Hack IITK 2026 – national cybersecurity hackathon hosted by IIT Kanpur's C3i Hub.
- JLPT N2 Certified (Japanese Language Proficiency), scored 156/180.
